Consultation Summary

Chief Complaint: Persistent headache since morning, associated with mild nausea and sensitivity to light.

Diagnosis: Patient complains of throbbing headache mainly in the frontal region for the past few hours. Associated symptoms include mild nausea, stress, and fatigue. No fever, vomiting, or visual disturbances reported. Vitals stable. Likely tension headache/migraine. Advised rest, hydration, and symptomatic treatment.

Follow-up: Avoid excessive screen exposure and stress. Maintain proper sleep and hydration. Return if headache worsens or vomiting/vision problems develop.

Prescription

1. Paracetamol 500mg

Dosage: 1 tablet | Frequency: Twice daily after food | Duration: 5 days | Notes: -
