Age: 20
Phone: 8591891441

Consultation Summary

Chief Complaint: Severe headache since morning, associated with nausea and sensitivity to light.

Diagnosis / Voice-to-text Notes: Patient complains of throbbing headache mainly in frontal region for the past 6 hours. Pain intensity moderate to severe. Associated symptoms include nausea, mild dizziness, and photophobia. No history of vomiting, fever, or loss of consciousness. Blood pressure stable. Likely migraine/tension headache. Advised hydration, adequate rest, and prescribed analgesics.

Follow-up Instructions: Take prescribed medication on time. Avoid stress and screen exposure. Maintain hydration and proper sleep. Return immediately if headache worsens, vision changes occur, or vomiting develops.

Prescription

1. Paracetamol 500mg

Dosage: 1 tablet | **Frequency:** Twice daily | **Duration:** 5 days | **Notes:** Take after food with plenty of water. Avoid stress and ensure proper rest.
